Oil Containment Booms

Premium & Customised Containment & Booms for Spill Industry

AVAILABLE TO US

Inflatable Oil Boom • Solid Flotation Boom • Permanent Boom
Towable Bladder • Fence Boom • Spill Berm
Collapsible Frame Tank • Beach Sealing Oil Boom

Towable Bladder

this is also called Floating Oil Boom is the most common usage for storage and transport of oil spill response. As a secondary fluid tank, this is really useful for Oil Spill Recovery, Sewage Water, and Chemical Spills in all types of water bodies and also on the land.

Collapsible Frame Tank

Spill Berm

The smartest way to control the obvious and unavoidable spillage. When not in use, they can be folded and stored, **3 types are there:** Spill Pad, Bracket berms, Foam wall Spill Berm

Mainly used for bulk water storage in fire fighting, spill recovery, or disaster relief sites. This tank is a favorite use of firefighters and first responders who are looking to keep a large supply in remote areas or at those sites where space is very limited.

Liquid & Gas Storage

Pillow Tank

The most cost-effective, temporary as well as a long-term solution for the bulk amount of different types of liquid or gas storage and transportation. These are very easy to install and use at any remote construction

Onion Tank

A self-rising, self-supporting onion circular shaped reservoirs/bladders /collapsible tank that can be the easiest solution for the temporary storage of the bulk amount of liquids, oil, water, recovered crude oil, jet fuel, firefighting foam,sewage, and other contaminants

Collapsible Frame Tank

Mainly used for bulk water storage in fire fighting, spill recovery, or disaster relief sites.This tank is a favorite use of firefighters & first responders who are looking to keep a large supply in remote areas or very limited space narrow sites.

Trash Containment

Solution for Water Surface Cleaning in River Sea & Lakes

Lake Trash Boom

This is widely used in marine construction dredging, and remediation projects for an easy containment of silt and sediment in a water body. Silt Barriers are so lightweight durable, and can be easily set up around construction sites to protect the marine ecosystem (can be customized)

Silt Curtain

These are widely used in marine construction, dredging, & remediation projects for easy containment of silt and sediment in a water body. These are lightweight, durable, & can be easily set up around construction sites to protect the marine ecosystem. Turbidity Curtains can be customized to work effectively well in calm waters as well as strong currents.

Trash Socks

These are high-quality plastic mesh designed to meet the demanding requirements of the geotechnical market including Land fill sites. As the trash Socks are installed, it starts to stop debris & pollutants from running water & prevents garbage transported by rainwater that contaminates the town water reservoirs.

Underwater Lift Bag

The purpose of any underwater lift bag is to salvage drowned objects from rivers/oceans. These bags are enclosed, pontoon style ideal for shallow water operations. There are 2 types of bag available to us. In the shape of a parachute/inverted teardrop with an open or closed single-point lifting contact

Open Closed Parachute Lift Bag.

In the shape of a cylinder with a single lifting point
Underwater Cylindrical Lift Bag.

Flood Barrier

In ancient days humans used to make barriers with sandbags. Now let us introduce the **Flood barrier** which is made of water. Here we use water to fight the water. This is more reliable, sustainable reusable, and available in different sizes and capacities. We have 2 type of barrier.

Inflatable Flood Barrier & Collapsible Flood Barrier

These portable barriers are perfect usage for rural/ any flood site quickly/ for any emergency situations.

Biogas Solution

We have manufactured Biogas tanks using top -quality technical fabric that provides an efficient biogas storage solution. We have different type of storage solutions to us:

Single Membrane Gas Holder Balloons

Backpack Gas Holder Balloons

Portable Flexible Biogas Digester & Storage Tank

Double Membrane Digester Balloons

Double Membrane Standalone Balloons
